WEEK 12 — BUILD WORK LOG

BUILD TRANSCRIPT — WORK LOG

This log summarizes actual work carried out in this session; it is not a fictional back-and-forth.

USER: Build the Week 12 Business Bending deliverable without requiring my manual work.

ASSISTANT: Chose the prior Week 2 Financial Evidence Passport. Defined core scope as record, summarize and export, rather than inventing additional features.

ASSISTANT: Implemented a Next.js React interface, Tailwind styling, local fictional demo, Supabase Google OAuth integration, authenticated Postgres inserts, RLS schema, CSV export and validation.

ASSISTANT: Added tests for totals and invalid input. Ran `node --test tests/*.test.mjs`; 3 tests passed.

ASSISTANT: Confirmed Vercel connected Git deployment context returned zero teams; cannot claim a published deployment or remote commits.

ASSISTANT: Identified missing Crystal Ball Brief, live domain, account integration, persona walkthrough and video as open milestones.

Follow-up development messages, errors, screenshots and verified deployments should be appended here, not fabricated.
