WEEK 12 — PERSONA TEST PROTOCOL

PERSONA TEST — PROTOCOL AND BASELINE

Status: Not executed. This is a test plan, not a fabricated result.

Synthetic persona: Doña Mari, 54, sells prepared food, uses WhatsApp, distrusts financial apps, reads slowly. All traits are fictional for test design.

Tasks: (1) Identify what the tool does. (2) Enter a sale of MXN 850. (3) Find income total. (4) Download CSV.

Screens to provide to a fresh evaluator: home, form, validation error, updated totals, exported CSV. Ask evaluator to narrate hesitation and abandonment point; record exact quotes, screenshots, severity, fix, and retest.

Potential confusion to investigate (NOT observed): "evidencia" might imply government validation; label clarifies that records are self-reported.

Actual test date: pending. Confusions observed: pending. Fix and retest: pending.
